## Trends in normalized hurricane damages in the US

Aslak Grinsted and Peter Ditlevsen

University of Copenhagen, Niels Bohr Institute, Centre for Ice and Climate, Copenhagen Ø, Denmark (ag@glaciology.net)

We analyze the ICAT normalized hurricane damage record for trends, and linkages to common hurricane teleconnections. No significant trends are found in the distribution of damages. However, there is a significant increasing trend in the frequency of extreme damage events, assuming that the distribution of damages have remained stationary.
