

AVISO+, the new reference web portal for altimetry

Vinca Rosmorduc (1), Emilie Bronner (2), Thierry Guinle (2), Caroline Maheu (1), Rosemary Morrow (3), Fernando Nino (3), and Florence Birol (3)

(1) CLS, DOS/SER/SUO, Ramonville StAgne, France (vinca.rosmorduc@cls.fr), (2) CNES, Toulouse, France, (3) LEGOS, Toulouse, France

AVISO is the showcase of CNES activities in altimetry. Indeed, the altimetric products processed by the SALP service from CNES (Service d'Altimétrie et de Localisation Précise) are disseminated via AVISO portal since 1995. In recent years, AVISO became a reference in the international oceanographic and altimetry communities, with more than 5,000 registered users in 2013.

In 2014 AVISO is enlarging its applications outside the purely ocean-oriented ones, thus becoming AVISO + (www.aviso.altimetry.fr). The portal opens to new applications such as hydrology / coastal / ice. Moreover, it merges with the CTOH (French Observation Service dedicated to satellite altimetry studies) website to provide users with operational as well as demonstration products and expertise in a unique website.

We present here all the novelties – new look, new functionalities, new products, new data access service. . . hoping to see you soon on our brand-new altimetry portal, www.aviso.altimetry.fr!
