

The role-playing: the art to catch the eye

Massimo Crescimbene, Federica La Longa, and Tiziana Lanza

Istituto Nazionale di Geofisica e Vulcanologia, Rome, Italy (massimo.crescimbene@ingv.it)

We present some interactive, immersive, authentic role-plays simulation designed to teach to different public: tertiary, secondary and primary students and an experience with a teachers group, after April 6 2009 L'Aquila Earthquake.

We will discuss about the basics of the role-play and its applications to the geosciences in outreach projects. Role-play is a powerful method to educate to risk mitigation with particular we will discuss our experience regarding seismic risk.

Finally, we will present some data on the effectiveness of the role-play in different settings in which we used it.
