

Geological Map and Sections of the Nilaw Area, Nurestan (Afghanistan)

mapped by G. FUCHS and A. MATURA, 1972

INDEX:

-  Quaternary deposits
 -  mountain slide
 -  Migmatite complex i. gen.
 -  banded gneisses; metabasites; augen gneisses
 -  marbles and calcisilicate rocks; with quartzites and metasilites
 -  quartzites
 -  metasilites and other non-carbonate metasedimentary rocks; relic zones in migmatites
 -  metavolcanic rocks; carbonate layers in metasilites
 -  garnet-staurolite schists and -gneisses (= andalusite)
 -  diorites and gabbros
 -  inclusions of garnet-staurolite gneiss, marble and calcisilicates, and quartzites
 -  transition between diorite and granite
 -  biotite- and hornblende-biotite granites and -gneisses
 -  two-mica granites (= tourmaline)
 -  dikes of various granites; aplites (A)
 -  pegmatites
 -  lamprophyric dikes
 -  fault zones
-
- s-planes
 - + dip 0 - 5°
 - x 6 - 40°
 - x 41 - 60°
 - x 61 - 85°
 - x 86 - 90°
-
- B-axes
 - horizontal
 - plunging

1:50,000

Explanation of Geographic Terms:
 Dr. = Darrah = Valley
 Koh. = Mountain
