In the paper "Influence of meteorology on PM$_{10}$ trends and variability in Switzerland from 1991 to 2008" (published in Atmos. Chem. Phys., 11, 1813–1835, 2011, doi:10.5194/acp-11-1813-2011, 2011) an error occured in Sect. 3.1, right column line 37.

Please find the correct sentence below.

Using the value $k = 2$ for the parameter k yields the classic AIC (Akaike, 1974) whereas $k = \log(n)$, n being the number of observations, yields the Bayesian Information Criterion BIC (Schwarz, 1978), which penalizes additional model terms more heavily.
