

Preface

Precipitation: Measurement, Climatology, Remote Sensing, and Modeling (EGU Session 2009)

S. C. Michaelides

Cyprus Meteorological Service, 28 Nikis Ave., 1086 Nicosia, Cyprus

This is the fourth consecutive volume of special issues of *Advances in Geosciences*, hosting papers from the General Session on Precipitation that are organized within the framework of the Atmospheric Science Division of the European Geosciences Union (EGU). The present volume includes papers that were presented during the General Assembly of EGU held in Vienna from 19–24 April 2009.

All the papers were reviewed by at least two independent reviewers from the international community and their valuable contribution is mentioned with gratitude. I also wish to express my appreciation to Spyros Athanasatos who has greatly assisted in the compilation of this volume through a systematic scrutiny of all the papers that he performed with diligence and concern. I also thank the staff of Copernicus Publications for their collaboration.
