In the manuscript "Using MODIS land surface temperatures and the Crocus snow model to understand the warm bias of ERA-Interim reanalyses at the surface in Antarctica" published in The Cryosphere, 8, 1361–1373, 2014, the *y*-axis in panel b of Fig. 8 was not shown. Please see the corrected figure here.

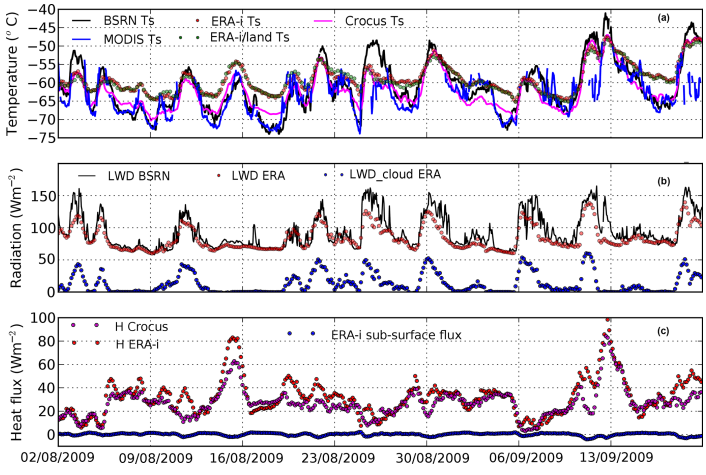

Figure 8. (a) Comparison between different observations of surface temperature at the South Pole: BSRN T_s (solid black curve), Crocus T_s (solid pink curve), ERA-i T_s (red point), LST MODIS (solid blue curve) and ERA-i/land T_s (green point). **(b)** Comparison between thermal radiations: BSRN LW_{down} (solid black curve), ERA-i LW_{down} (red point) and ERA-i LW_{down_cloud} (blue point). ERA-i LW_{down_cloud} was obtained by the difference between ERA-i LW_{down} and ERA-i clear-sky LW_{down}. **(c)** Comparison between turbulent fluxes of sensible heat: Crocus H (violet point), ERA-i H (red point) and ERA-i sub-surface flux (blue point).
